COMP 3920 Database Systems 1

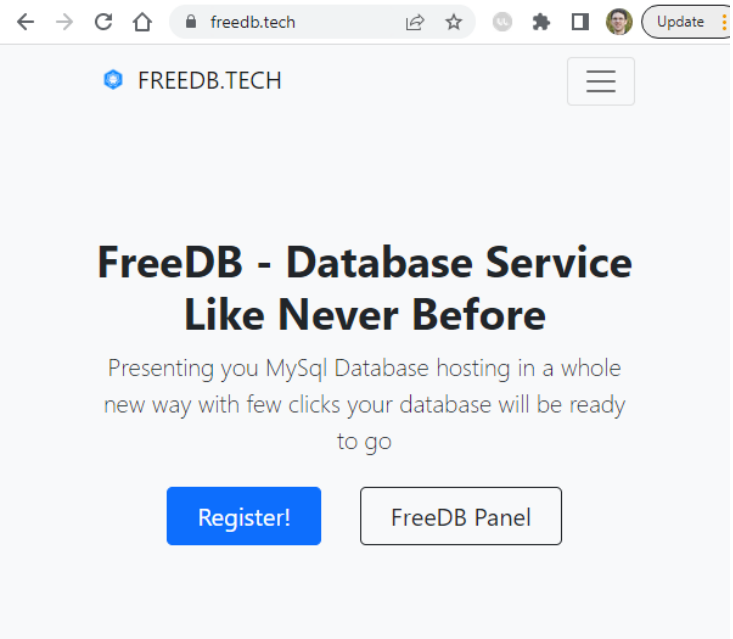
FreeDB

Introduction:
The goal of this document is to serve as a walkthrough of creating an account with FreeDB.tech.

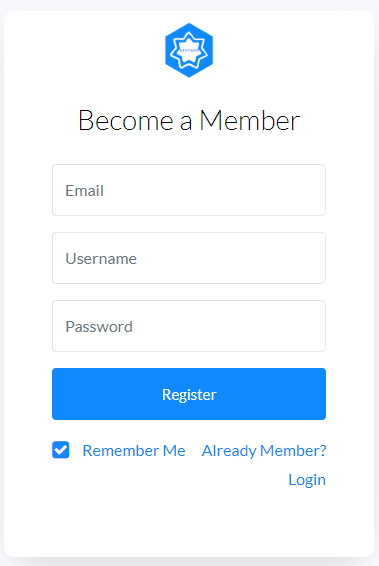
FreeDB provides small (<50MB) MySQL databases for free for use in development and testing environments. This is perfect for us if we just need a quick and easy database that can be accessed freely on the internet. Remember, if we were to just use database on our localhost, only we could see it (no one else can access our localhost).

Step 1: Create a FreeDB.tech account.

Go to https://freedb.tech and register for a new account (if you don't already have one).

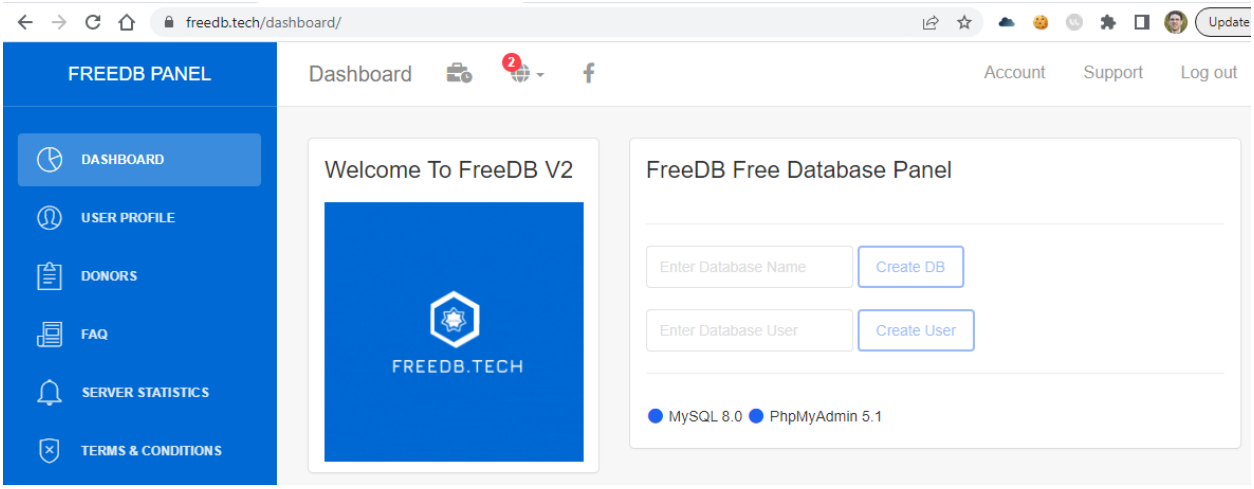


Complete the standard register information and verify your email.



Step 2: Create a new FreeDB database.

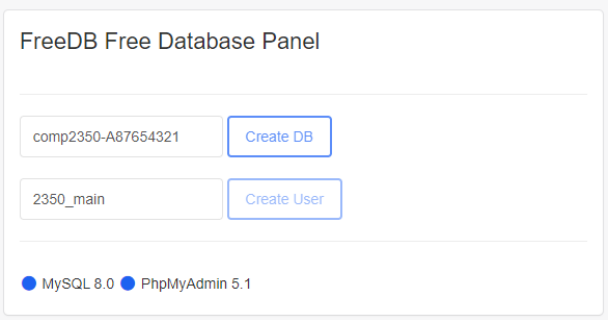
Once you are logged in to your new FreeDB account, you should see a dashboard panel like this:



Create a new free Database, by entering a database name and user name into the FreeDB Free Database Panel.

Give your database a name.

Click "Create DB".

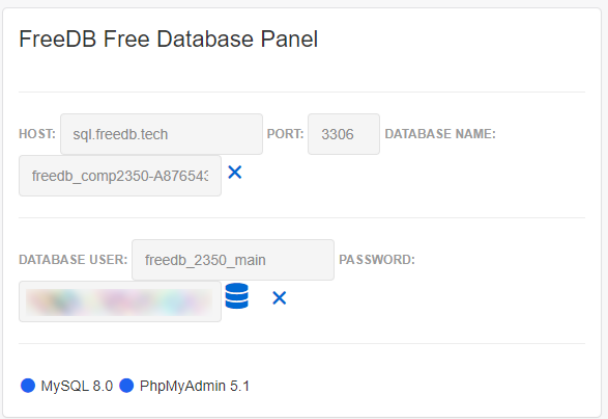


Create a user called and give it a name.

Click "Create User".

You should now have the details to connect to your database.

- Host
- Port
- Database Name
- User
- Password



Write these down somewhere so you don't forget them!!

Pro Tip:

Although FreeDB is nice and provides us with the host, port, user, password and database name for us, many other MySQL providers will provide us with a connection URL such as this:

```
mysql://a0wj08yp3h60iax9:xhov21ul59ilv8e5@jtb9ia3h1pgevwb1.cbetxkdyhwsb.us-east-1.rds.amazonaws.com:3306/kjm3rtal36l1mlue
```

It is important to know how to parse this connection URL into the individual parts.

Below is the same connection URL color coded and labelled to distinguish the key parts of the URL.

mysql://**a0wj08yp3h60iax9**:**xhov21ul59ilv8e5**@**jtb9ia3h1pgevwb1.cbetxkdyhwsb.us-east-1.rds.amazonaws.com**:**3306**/**kjm3rtal36l1mlue**

Protocol:	**mysql**
User:	**a0wj08yp3h60iax9**
Password:	**xhov21ul59ilv8e5**
Host:	**jtb9ia3h1pgevwb1.cbetxkdyhwsb.us-east-1.rds.amazonaws.com**
Port:	**3306**
Database:	**kjm3rtal36l1mlue**
