

Task #1: Using Prim’s algo to find MST

1) Given graph:

What are the first 5 vertices chosen when running Prim’s ?

Without given starting Vertex: _____

Starting at Vertex b: _____

Starting at Vertex d: _____

Starting at Vertex i: _____

2) Given graph:

What are the first 5 vertices chosen when running Prim’s ?

Without given starting Vertex: _____

Starting at Vertex c: _____

Starting at Vertex d: _____

Starting at Vertex g: _____

Task #2: Using Kruskal algo to find MST with showing steps

1) Given graph:

To draw MST: (To highlight edges in MST)

Edge	Weight	Yes/No	Total W	Disjoined sets
b-h	1	Yes	1	{a}, {b, h}, {c}, {d}, {e}, {f}, {g}, {i}
g-h	1	Yes	2	{a}, {b, g, h}, {c}, {d}, {e}, {f}, {i}

Total weight of MST: _____

2) Given graph:

To draw MST: (To highlight edges in MST)

[illegible]

Total weight of MST: _____

Task #3: Dijkstra algo exercise

Given graph, if start from Vertex c

Which Vertex is the last to be included? _____

The path is for it is c -

Prev/parent:

[illegible]

Distance:

[illegible]

Given graph, if start from Vertex e

Which Vertex is the last to be included? _____

The path is for it is e -

Prev/parent:

[illegible]

Distance:

[illegible]
